

**Amendments to the Claims**

This listing of claims will replace all prior versions and listings of claims in the application.

Claim 1 (Withdrawn): A mechanism for angularly adjusting a turntable that is rotatably mounted to a base, the turntable supporting a cutting tool, the mechanism comprising:

a lever pivotally mounted to the turntable, the lever including a yoke with opposed sidewalls separated by a distance;

a threaded rod that extends through the sidewalls of the yoke in a direction parallel to a tangent of the turntable; and

an insert located between the sidewalls, the insert having a shape suitable to engage a recess of the base, the insert having a threaded bore extending therethrough, the rod extending through the bore in threaded relation so that rotation of the rod causes lateral movement of the insert along the rod between the sidewalls, in turn resulting in angular adjustment of the turntable relative to the base.

Claim 2 (Withdrawn): The mechanism of claim 1, wherein pivotal motion of the lever moves the insert selectively in and out of engagement with the recess.

Claim 3 (Withdrawn): The mechanism of claim 1, wherein the lever is mounted to the turntable to pivot on an axis parallel to the threaded rod.

Claim 4 (Withdrawn): The mechanism of claim 1, wherein:  
the turntable rotates with respect to the base on an axis; and  
the lever is mounted to pivot on an axis parallel to the axis of rotation of the turntable.

Claim 5 (Withdrawn): The mechanism of claim 1, wherein the lever is generally elongate in shape, and wherein the lever is pivotally mounted to the turntable at a point located intermediate the length of the lever.

Claim 6 (Withdrawn): The mechanism of claim 1, further comprising a knob attached to an end of the threaded rod.

Claim 7 (Withdrawn): An apparatus comprising:  
a base having at least one recess;  
a turntable rotatably mounted to a base, the turntable supporting a cutting tool;  
a mechanism for angularly adjusting the turntable relative to the base, the mechanism comprising:

a lever pivotally mounted to the turntable, the lever including a yoke with opposed sidewalls separated by a distance;  
a threaded rod that extends through the sidewalls of the yoke; and  
an insert located between the sidewalls, the insert having a shape suitable to engage a recess of the base, the insert having a threaded bore extending therethrough, the rod extending through the bore in threaded relation so that rotation of the rod causes lateral movement of the insert along the rod between the sidewalls, in turn resulting in angular adjustment of the turntable relative to the base.

Claim 8 (Withdrawn): The apparatus of claim 7, wherein the base includes multiple recesses corresponding to respective angular positions of the turntable with respect to the base.

Claim 9 (Withdrawn): The apparatus of claim 7, wherein pivotal motion of the lever moves the insert selectively in and out of engagement with the recess.

Claim 10 (Withdrawn): The apparatus of claim 7, wherein the lever is mounted to the turntable to pivot on an axis parallel to the threaded rod.

Claim 11 (Withdrawn): The apparatus of claim 7, wherein the lever is generally elongate in shape, and wherein the lever is pivotally mounted to the turntable at a point located intermediate the length of the lever.

Claim 12 (Withdrawn): The apparatus of claim 7, further comprising a knob attached to an end of the threaded rod.

Claim 13 (Withdrawn): The apparatus of claim 7, wherein the threaded rod extends through the sidewalls in a direction perpendicular to the sidewalls.

Claim 14 (Original): An apparatus comprised of:  
a base having at least one recess;  
a turntable rotatably mounted to a base, the turntable supporting a cutting tool;  
an angular-adjustment lever pivotally mounted to the turntable, the angular-adjustment lever having a first insert proximal to the turntable, the first insert capable of engaging the at least one recess;  
a fine-adjustment mechanism mounted to the turntable, the fine-adjustment mechanism comprised of:  
a fine-adjustment lever pivotally mounted on the turntable;  
a second insert having an opening therethrough, the second insert supported by the fine-adjustment lever and adapted to engage the at least one recess; and  
a threaded rod supported by the fine-adjustment lever and extending through the opening in the second insert.

Claim 15 (Original): The apparatus of claim 14, wherein:  
the fine-adjustment lever includes at least one notch; and  
a latch holder is attached to the turntable, the latch holder containing a spring secured by a retainer plate and a latch having at least one protrusion capable of mating with the at least one notch in the fine-adjustment lever, thereby holding the fine-adjustment lever in place.

Claim 16 (Original): The apparatus of claim 15, wherein a repress plate aligns the fine-adjustment lever with the latch holder.

Claim 17 (Original): The apparatus of claim 14, wherein:  
the threaded rod has a first and a second end;  
a control knob is attached to the first end; and  
a locking nut attached to the second end secures the threaded rod to the calibration lever.

Claim 18 (Original): The apparatus of claim 17, wherein rotation of the control knob causes the insert to move along a length of the threaded rod.

Claim 19 (Currently amended): The apparatus of claim 18, wherein movement of the first or second insert results in a change of a cutting angle of the cutting tool.

Claim 20 (Original): The apparatus of claim 14, wherein the fine-adjustment lever further includes:

a first sidewall having a first opening;  
a second sidewall having a second opening; and  
the threaded rod extends through the first opening and the second opening.

Claim 21 (Currently amended): The apparatus of claim 14, wherein:  
the ~~worktable~~ turntable has an edge that defines a radius of curvature; and  
the threaded rod has a length extending along a line tangential to the radius of curvature.

Claim 22 (Withdrawn): The apparatus of claim 14, wherein:  
the angular-adjustment lever is mounted to the turntable to pivot on a first axis; and  
the fine-adjustment lever is mounted to the turntable to pivot on a second axis perpendicular to the first axis.

Claim 23 (Original): The apparatus of claim 14, wherein:  
the turntable has an outwardly extending arm; and  
the angular-adjustment lever and the fine-adjustment lever are mounted to the arm.

Claim 24 (Currently amended): An apparatus comprising:  
a base having at least one recess;  
a turntable rotatably mounted to a base, the turntable supporting a cutting tool;  
a mechanism for angularly adjusting the turntable relative to the base, the mechanism comprising:

a lever pivotally mounted to the turntable, the lever including a fine-adjustment mechanism mounted to the turntable, the fine-adjustment mechanism comprised of:

a fine-adjustment lever pivotally mounted on the turntable;  
~~a second~~ an insert having an opening therethrough, the ~~second~~ insert supported by the fine-adjustment lever and adapted to engage the at least one recess; and  
a threaded rod supported by the fine-adjustment lever and extending through the opening in the second insert.

Claim 25 (Original): The apparatus of claim 24, wherein:  
the fine-adjustment lever includes at least one notch; and  
a latch holder is attached to the fine-adjustment mechanism, the latch holder containing a spring secured by a retainer plate and a latch having at least one protrusion capable of mating with the at least one notch, thereby holding the fine-adjustment lever in place.

Claim 26 (Original): The apparatus of claim 25, wherein a repress plate aligns the fine-adjustment lever with the latch holder.

Claim 27 (Canceled)

Claim 28 (Withdrawn): The mechanism of claim 27, wherein:  
the first means includes an angular-adjustment lever that extends radially from the turntable; and  
the second means includes a fine-adjustment lever that pivots along an axis perpendicular to a radius of the turntable.
